

Skid Steer Loader Grapple Buckets

The grapple bucket attachment combines the loading and leveling actions of a skid steer bucket with the "grabbing ability" of two hydraulic grapples. The grapple bucket attachment's basic design allows it to load and grapple large and/or uneven objects as well as clean up the smallest debris. Our grapple buckets feature enclosed cylinders and hoses to protect against debris and stray limbs. We have also increased the depth of the bucket - giving it a larger loading capacity than ever before. Reinforced ribbed bottom reduces bowing and wear of the grapple bucket. With our new design you will have an unobstructed view of the materials entering and exiting the skid steer attachment. These improvements are unique only to Loflin Fabrication. No other skid steer grapple bucket attachment on the market provides these essential features.

Specifications

Hydraulic Cylinders	Grapple Bucket
Bore	2"
Stroke	10"
Pins	1.25"
Bucket Tines	
Spacing	8.5"-9"
Thickness	.5" x 4"
Material	.5" 60,000 psi min.
Grapple Tines	
Opening Height	51"
Material	.5" 60,000 psi min.
Weight	
66" Wide	847 lbs.
